EDUCATION

Pimpri Chinchwad University

Bachelor of Technology in **Computer Science and Engineering**

Pune, Maharashtra

2023 – 2027

EXPERIENCE

Freelance

Aug – 2025

Community Fest Registration Platform

[Live-Link](#)

- Developed a full-stack registration system for community festival events featuring intuitive, user-friendly forms that allowed participants to easily register for multiple events. Designed and implemented backend APIs to securely handle participant data storage, validation, and event categorization, ensuring accurate organization of registrations and smooth communication between the frontend and backend systems.
- Deployed the application on Vercel, leveraging its cloud hosting capabilities to provide fast and reliable access to users. Built a fully responsive interface optimized for both mobile and desktop devices, ensuring a seamless user experience across different screen sizes and improving accessibility for participants registering from any device.

PROJECTS

Pac-Wallet | Node.js, MongoDB, JavaScript, Stripe

- Engineered Pac-Wallet, a full-stack digital wallet and fintech simulation platform using React.js, Node.js, Express.js, MongoDB, and Mongoose, allowing users to securely manage balances, perform peer-to-peer money transfers, and monitor transaction history through a responsive web interface.
- Architected scalable and secure backend REST APIs with JWT-based authentication, HTTP-only cookies, bcrypt password hashing, middleware-based route protection, and server-side input validation, following industry-standard security practices used in modern financial applications.
- Implemented core fintech functionalities including wallet balance management, transaction processing logic, payment gateway sandbox integrations for testing digital payment workflows, and optimized API handling to improve performance, reliability, and user experience.

APT | Node.js, JavaScript (ESM), Crypto module

[Live-link](#)

- Developed a custom JSON Web Token (JWT) library from scratch in JavaScript, implementing token encoding, decoding, signing, and verification functionality without relying on third-party authentication libraries. Built cryptographic signing and signature verification using native Node.js crypto APIs, supporting both HMAC-based (HS256) and RSA-based (RS256) algorithms.
- Developed a lightweight, fully custom JSON Web Token (JWT) library from scratch to gain a deep understanding of token-based authentication and authorization mechanisms. Implemented core functionalities including token generation, payload encoding/decoding, cryptographic signing, signature verification, and expiration validation using native Node.js cryptographic APIs, and published the library as an NPM package with modular ES module support.
- Implemented comprehensive token validation features, including payload parsing, signature integrity checks, and expiration (exp) claim verification to ensure secure authentication and authorization workflows. Designed the package with a modular ES module architecture for easy integration into modern JavaScript and Node.js applications, and published it as an NPM package for public use and reuse across projects.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL (MySQL, Postgres), HTML, CSS.

Frameworks / Libraries: React, Node.js, Next.js, Tailwind.

Developer Tools: Git, Docker, Postman, VS Code.

Core: Data Structure Algorithms, Object Oriented Programming System, Operating Systems.
